EMC²®

Creating Real-Time, Critical Response Infrastructure at EMC²

As data becomes an extremely powerful tool for business, protecting the data is a mission-critical task. EMC² wanted to equip its team with the best tools to handle critical situations and asked Actis to create the AV solutions to power it.

The Challenge

EMC^2 provides the technologies and tools that can help you release the power of your information. They can help you design, build, and manage flexible, scalable, and secure information infrastructure.

But ensuring that information is protected requires constant monitoring and occasionally demands quick intervention by the EMC^2 teams. In order to improve their ability to perform effectively in high-stress situations, their Bangalore facility needed to be equipped with the latest AV solutions for their Global Command Centre, CIRT (Critical Incident Response Team) room and Meeting rooms.

The challenge was to create a platform for advanced, real-time collaboration to ensure smooth operations and better performance under pressure.

creating critical-response infrastructure

The Solution

CIRT room with **Multi-purpose Video Wall**

The Professional Services Group at Actis deployed a solution across the Global Command Centre, CIRT (Critical Incident Response Team) Room and 50 Meeting Rooms.

Actis has also installed the latest Crestron DigitalMedia (DM) solutions for data presentations at EMC, making them the first company in India to be equipped with this end-to-end digital media distribution infrastructure.

The Global Command Centre and the CIRT room are integrated with Multi-purpose video walls that are used to display mission critical data and for video conferencing. These video walls are also used to deliver impressive corporate presentations to visitors / clients.
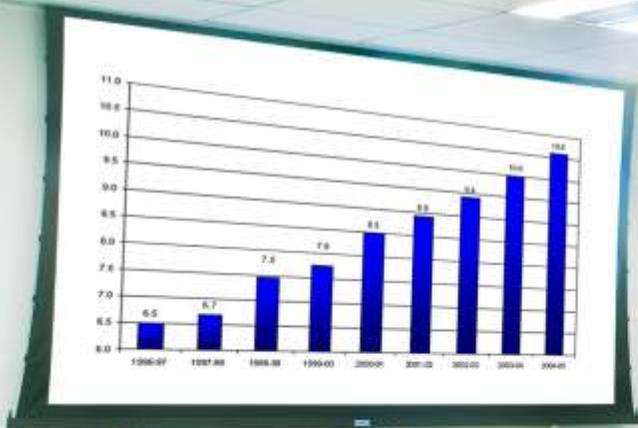

Besides this, the office is equipped with High-definition audio and video conferencing systems where an auto-sync feature turns the entire system on/off once the computer is connected/disconnected from the input port. Touch-panels provide users with convenient AV control of the facility.

The Result

EMC^2 was looking to upgrade its infrastructure to improve collaboration in both everyday and worst case scenario situations. This required specialised integration to ensure smooth interactions at all times.

The result is an end-to-end digital distribution and control network merged with innovative display technologies, for the first time in India.

"Actis has provided us with complete end-to-end solutions. We value their technical expertise which has aided us in better information management."

Murali Nair
Senior Facility Manager – EMC^2
